

WHAT DOES IT TAKE TO BE A FASHION DESIGNER?

To be a fashion designer, you must be a creative and critical thinker. Fashion designing deals with creativity.

FASHION DESIGNING IN BRAMBLE

When you hear about a tailor, what comes to mind?

S/he must be sewing!

Yes. They sew. They make our dresses. I am sure you have had countless encounters with them. Either positively or negatively. Everyone wear a dress and how this perfectly fits them depends on the competence of the tailor who made it.

While in our world we focus on tailoring, there is a difference between Fashion designing and tailoring, so to say.

Fashion designing includes the act of innovating and making our clothes, shoes, bags, and some other fashion accessories. Fashion itself is an intricate part of our lives from daily living to glamorous (or not glamorous) parties.

We believe that Fashion designing is a great skill and can be a turnaround for the participants.

So what does it take to be a fashion designer?

To be a Fashion designer, you must be creative and think critically.

A fashion designer thinks out of the box to create a breathtaking design capable of attracting customers.

A fashion designer must learn about the nooks and cranny of fashion designing as that creates an atmosphere for design to thrive.

A fashion designer must strive to achieve professionalism in the work. It helps them to stand out among the lot.

We have a fashion school in Bramble and within two weeks of active learning, the participants have gained so much knowledge.

Conclusively, in Fashion designing, artistry acquires a wide array of skills, including drawing, an eye for colour and texture, and ability to envision concepts in some dimensions, and how to make use of the electrical machines, weaving machine and others involved in the sewing of the fabrics and how to cut them.

CROCHETING

WHAT DOES THE LEARNERS HAVE TO SAY ABOUT CROCHET?

To us in Bramble art and craft is a goal
-Victoria Ode

A learner named Comfort was asked, "what do you know about crocheting?" She answered and said, "I thought it was a skill for grandmothers, but now, we have taken it up"

So are you ready to get started with crochet, too?

CROCHET IS PRACTICAL -ELIZABETH (LEARNER)

"Crochet is practical". You don't need to get lots of expensive equipment to get started with crochet. A Crochet needle, a ball of wool, a free crochet pattern and you are ready to go! Crocheters can take their crochet projects everywhere with them and won't need a huge bag to do it.

A crochet hook is about 15cm long and barely weighs anything, so you can carry it around in a handbag.

PATIENCE
DANIEL COMFORT (LEARNER, 13 Y/O)

Every skills requires your patience, so is crocheting. There is nothing like concentrating on a pattern you love, plus the steady use of your hands and the pleasant feel of yarn, to take your mind off your cares. So if life is giving you lemons, pick up your hooks and crochet. Remember not to jump a line. Ride your crocheting with patience. Those were the words of our Crochet tutor.

BUILDS SELF-ESTEEM
-VICTORIA (LEARNER, 13 Y/O)

I hate to feel inferior. Crocheting has help build my self-esteem by helping me build new skills, allowing me to feel productive, providing useful way to give to others, create beauty through self-expression.

MIND ACTIVENESS
ThankGod (LEARNER, 14 Y/O)

The elements of math involved in crocheting (counting your stitches, being aware of the beginnings/endings of rows, totting up repetitions of patterns) all help to keep your thinking processes sharp.

TECHNOLOGY IN EDUCATION

Opeyemi Okunade (Catalyst)

Have you heard Bramble without Technology before?

Technology is one integral part of our education, which in turn has become an inevitable part of our lives. We cannot imagine surviving without technology in education in today's fast-moving world. You will agree with me that the COVID-19 pandemic has proven, how important technology is for us, in the educational system. It is needed to stay connected with work, to communicate, and basically to survive.

Technology has shown us how we can overcome the barriers of time and place with our phones, computer, and the internet. This, especially doing the Covid-19 period has made education accessible and affordable to people across the world, even after the pandemic.

There are countless reasons why technology is a key aspect of learning. Whether we like it or not, technology is everywhere and it's involved in everything we do.

IMPORTANCE OF TECHNOLOGY IN EDUCATION

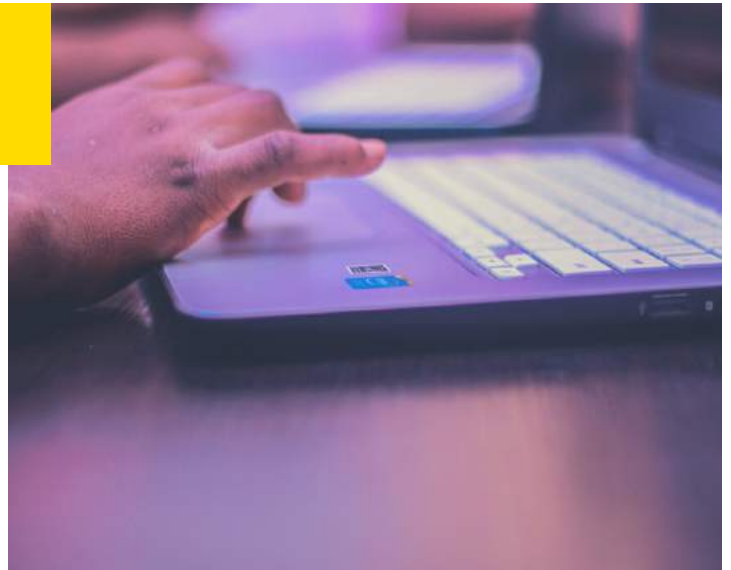

RELATIONSHIP

When Catalysts effectively integrate technology into subject areas, catalysts grow into roles of adviser, content expert, coach. Technology helps make teaching and learning more meaningful and fun. Learners are also able to collaborate with their mates through technological applications.

ENGAGEMENT

The children of this generation are considered technological learners. They learn best by being more interactive, and technology is what helps them do that. Learners often struggle to stay on task or interested, and with resources to help the catalyst, they can better stay focused and learn faster.

CREATIVITY

Catalyst can come up with creative ways to teach their learners that keep them engaged. Technology has changed the learning environment so that learning is more hands-on. Having access to other information outside of the books gives the learners many different ways to learn a concept
